1.0 Executive Summary

Saya Skincare, an Australian-certified organic brand founded in Noosa, Queensland, plans to enter the UK skincare market with its sustainable, vegan, and cruelty-free formulations made from native botanicals such as Kakadu Plum and Desert Lime. The brand aims to connect with eco-conscious women aged 25 to 40 in major UK cities including London, Manchester, and Birmingham, which all have a strong presence of premium beauty retailers (GlobalData, 2022). The UK skincare industry, valued at USD 4.42 billion in 2024 and growing at 4.6% annually (MarketLine, 2025), presents a strong opportunity for expansion.

Saya's chosen entry mode is direct exporting, supported by a UK-based third-party logistics (3PL) partner. This approach reduces financial risk while ensuring compliance with local cosmetic regulations, including the Responsible Person (RP) requirement and SCPN product registration. It aligns with the framework proposed by Johanson and Vahlne (2009) and the marketing principles of Kotler and Keller (2021), helping Saya learn gradually about the market and build confidence before committing larger resources.

The company's marketing objectives follow the SMART and G-STIC frameworks. In the short term, Saya aims to increase brand awareness by 10% through targeted digital marketing. Medium-term goals include achieving £500,000 in direct online sales with a 25% repurchase rate, while long-term plans involve partnerships with luxury retailers such as Selfridges and Liberty. Together, these goals position Saya as an "affordable luxury" brand that combines authenticity and accessibility.

The product strategy focuses on adapting packaging, labelling, and size to meet UK regulations and reflect consumer demand for sustainable beauty. Discovery kits and travel sizes will allow potential customers to try Saya's hero products more easily, lowering the trial barrier. Competitor benchmarking shows that Saya can stand out through its Australian botanical identity and commitment to biodegradable packaging.

The pricing strategy follows Kotler and Keller's (2021) value-based approach, maintaining a balance between affordability and premium quality. Discovery kits will retail between £25 and £35, core serums between £45 and £60, and creams above £70, achieving a healthy gross margin of around 60 to 65 percent.

Saya will start with a Direct-to-Consumer (DTC) model through Shopify UK, followed by selective partnerships with premium department stores. Its communication strategy integrates social media, influencers, PR, loyalty programs, and in-store events to build awareness and trust. By combining ethical sourcing, regulatory compliance, and sustainable innovation, Saya is well-positioned for long-term growth in the UK clean beauty market.

2.0 Situation Analysis

2.1 Market relevance demonstration for the selected product, selected country and market entry mode

Founded over twenty years ago in Noosa, Queensland, by Saya McDermott, Saya Skincare has evolved from handmade natural remedies into a luxury organic line featuring Australian botanicals such as Kakadu Plum and Desert Lime. These ingredients are scientifically recognised for their strong antioxidant and anti-inflammatory properties that promote skin protection and repair (Kapini et al., 2025)

Saya is an Australian certified organic, vegan, cruelty-free brand known for its sustainable packaging and ethical ingredient sourcing. The brand resonates with eco-aware women aged 25-40 in London, Manchester, and Birmingham, who value authenticity, ethical sourcing, and sustainability in skincare. The growing demand for eco-friendly skincare in the UK is a big reason why Saya is doing well. (Lin et al., 2018)

2.2 Market conditions and target customers

The UK represents an attractive market opportunity for Saya Skincare. The UK skincare industry is expected to be valued at approximately $4.42 billion in 2024, growing at a compound annual growth rate of 4.6% (OpenAthens / Sign In, n.d.). Clean beauty is the fastest-growing category in Europe, projected to reach $981.6 million by 2030, with a compound annual growth rate of 15.2% (UK Clean Beauty Market Size &Amp; Outlook, 2030, 2025). Australia is culturally similar to the UK. The country also has stable economic conditions and clear rules for cosmetics. These factors reduce the risks of entering the market. They also make it easier to adapt to the growing demand for ethical and sustainable beauty products.

Saya Skincare will enter the UK through direct exporting, supported by a third-party logistics (3PL) provider. This low-risk mode allows the firm to retain control over pricing, branding, and customer experience while meeting UK regulatory requirements such as Responsible Person appointment and product registration (Gov.uk, 2021). Partnering with a local 3PL streamlines distribution, returns, and customer trust (Lloyd, 2025).This incremental, resource-conserving approach aligns with the Uppsala internationalisation model, enabling Saya to gradually build market knowledge and commitment before pursuing deeper investment forms (Johanson & Vahlne, 2009).

The United Kingdom is among Europe’s largest skincare markets, valued at USD 4.42 billion in 2024 and growing steadily at a 4.6% compound annual rate (MarketLine, 2025). Following the pandemic, the market has recovered strongly as clean and vegan beauty products move firmly into the mainstream. Consumers increasingly value ingredient transparency, ethical sourcing, and sustainable packaging. Online retailing now accounts for 52.1% of total beauty sales, while

offline purchases have continued to decline from 79.9% in 2019 (Euromonitor, 2025). With a stable economy—GDP projected to be 4.5% higher than pre-pandemic levels by 2025—and clear cosmetic regulations, the UK provides a favourable environment for premium organic brands (Harari, 2025). Moreover, the psychic proximity between Australia and the UK, including a shared language, similar cultural values, and long-standing trade ties, further reduces market entry risk (Kotler et al., 2022).

Saya Skincare's target market is environmentally conscious women aged 25-40, typically with household incomes exceeding £40,000, primarily residing in London, Manchester, and Birmingham—cities known for their thriving beauty industries and strong self-care cultures, making them hubs for high-end beauty retail and self-care (Professional Beauty, 2025). These consumers are often socially responsible and value authenticity, and they favor brands that combine sustainability with accessible luxury, a perfect fit with Saya's clean beauty philosophy.

2.3 Competitive analysis

The UK clean-beauty market is competitive, led by domestic brands such as Pai Skincare, which targets sensitive-skin users through an all-organic, vegan, dermatologist-tested approach. (About Us | Sarah Brown’s Story – Why I Started PAI Skincare, n.d.) Its strategy centers on building trust and credibility, combining minimalist packaging with scientific validation to reinforce its skin health expertise. Tropic Skincare is well known for its naturally derived ingredients and direct-selling model, combining transparency, community engagement, and mid-to-premium pricing (Our Journey: The Tropic Story – Tropic Skincare, n.d.), The brand's personal sales network also fosters customer loyalty and brand advocacy—key sources of competitive advantage. Meanwhile, Aurelia London distinguishes itself with its probiotic skincare technology, blending scientific efficacy with luxurious allure. By offering clinically researched, results-focused, and aesthetically pleasing products, Saya appeals to affluent consumers seeking a balance between efficacy and luxury (Aurelia Cellular Beauty, n.d.)

While all claim to employ ethical sourcing and use natural ingredients, Saya Skincare stands out thanks to its Australian botanical heritage, certified organic credentials, and eco-friendly packaging. Positioned as an “affordable luxury,” Saya bridges high-end science with natural authenticity, offering a sustainable choice for eco-conscious UK consumers.

3.0 Marketing Objectives

Saya Skincare's marketing objectives are to increase brand awareness in the short term, strengthen direct sales channels in the medium term, and eventually establish partnerships with high-end retailers. This is to enhance brand influence in the competitive "clean beauty" market. These goals adhere to the SMART framework- Specific, Measurable, Achievable, Relevant, and Time-bound to ensure structured and measurable progress (Kotler & Keller, 2021). The SMART framework also helps to better express the product's philosophy: to provide sustainable, effective, and practical skincare products.

Table 1. SMART Marketing Objectives for Saya Skincare in the UK Market

Timeframe	Objective	Key Performance Indicators (KPI)	Justification
Short-term (Year 1)	Increase brand awareness by 10% in the UK through targeted social media and influencer marketing.	Brand online surveys, website visits, and online customer engagement.	Build brand awareness among women aged 25-40 who are environmentally conscious, natural, and cruelty-free in London, Manchester, and Birmingham (Mintel, 2025).
Medium-term (Years 2–3)	Achieve £500,000 in direct sales and a 25% repurchase rate through the UK-focused website.	Website purchase data, customer profile share, conversion rate, and repurchase data.	This validates Saya's direct-to-consumer (DTC) model, aligns with the clean beauty sector's 15.2% annual growth rate, and builds consumer loyalty (Grand View Research, 2023).
Long-term (Years 4–5)	Establish partnerships with three high-end retailers, including Selfridges, Harrods, or Liberty.	Number of retail partners and share of retail sales.	Increase Saya's legitimacy and visibility in the high-end skincare market (Euromonitor International, 2025).

Each phase of the strategy follows the G-STIC framework (Kotler et al., 2022).

Goal: Saya aims to position itself as a premium clean beauty brand in the UK within the next 12–18 months by building strong brand awareness and encouraging trials of its hero products. Like the Super Serum, Renew Serum, Intense Night Repair Cream, and Refining Pink Clay Mask.

Strategy: The target audience comprises environmentally conscious women aged 25–40 who live in major beauty hubs such as London, Manchester, and Birmingham (Global Data, 2022). Saya's value proposition combines Australian botanical ingredients with organic, cruelty-free formulas and sustainable packaging, offering an 'affordable luxury' alternative positioned just below the super-premium category.

Tactics: The brand will introduce its bestsellers alongside discovery kits to stimulate product trials. Logistics and returns will be supported through a UK-based third-party logistics (3PL) partner. Pricing will remain premium yet accessible, complemented by incentives such as free shipping and a loyalty rewards program.

Implementation: The first steps involve partnering with a UK 3PL provider, appointing a Responsible Person (RP) to meet cosmetic compliance requirements, and modifying packaging to follow UK labelling regulations (Gov.uk; CIRS, 2025).

Control: Performance will be tracked using indicators such as sales growth, repeat purchase rate, website conversion, media coverage, and customer acquisition cost (Shirley & Rowland, 2021). Quarterly reviews will help assess the effectiveness of each activity and guide future adjustments.

These objectives meet the SMART principles. In the short term, Saya aims to raise brand awareness and engagement. The medium-term goal emphasizes building consumer trust and loyalty. And the long-term goal is to strengthen Saya’s premium positioning through partnerships with high-end retailers. Together, these phased objectives effectively reflect Saya Skincare’s commitment to a high-end, sustainable brand strategy.

4.0 Marketing Strategy

Saya's marketing strategy is designed to align with its short-, medium-, and long-term objectives while building a strong and credible brand presence in the UK clean beauty market. The strategy integrates the key elements of the marketing mix, focusing on product adaptation, pricing, distribution, and communication. Each component supports Saya's goal of positioning itself as an accessible yet premium sustainable skincare brand for environmentally conscious UK consumers.

4.1 Product Strategy

Kotler and Keller (2021) note that firms expanding globally must decide "how much to adapt their marketing strategy to local conditions," with adaptations involving changes to preferences, regulations, and cultural norms. For Saya Skincare's UK entry, these adjustments should prioritise packaging, labelling, and product sizing to meet cosmetic regulations and sustainability expectations.

Building on this framework, product adaptation can include packaging, labelling, design, or brand name, and its effectiveness depends on how extensive and distinctive those changes are (Tsougkou et al., 2025). Packaging and labelling are the most frequent forms of adaptation, aligning with Saya's need to comply with UK market standards. Hollender et al. (2017) describe such adaptation as a strategic capability that helps SMEs remain competitive globally despite limited resources. By refining its packaging and discovery kits for UK consumers, Saya demonstrates a moderate adaptation that builds credibility and trust.

Saya's first key adaptation should address packaging and labelling, mandatory under UK cosmetic law. This includes appointing a Responsible Person (RP) with a UK address, listing ingredients in INCI format, notifying products through the SCPN, and submitting safety documentation. Non-compliance can lead to fines, recalls, or bans (Gov.uk, 2021; CIRS Group, n.d.).

Beyond compliance, these actions reflect what consumers value today sustainability and transparency. The Green Beauty Barometer found that 59% of women read ingredient labels before purchase (Cosmetics Design, 2015), showing a rising expectation for clear, honest communication. UK competitors such as Tropic Skincare, Pai Skincare, Nathalie Bond, Neal's Yard Remedies, and Evolve Organic Beauty already embrace this trend through visible sustainability claims and traceable ingredients.

As shown in **Table 2 (see Appendix A)**, which compares key UK clean-beauty brands, leading competitors emphasise transparency, ethical sourcing, and trial accessibility. Across all brands, sustainable packaging, B Corp certifications, and discovery formats are consistent themes that build trust and encourage purchase. Brands such as Tropic Skincare and Evolve Organic Beauty

stand out for integrating refillable and travel-size kits, aligning sustainability with convenience.. Saya can tap into these expectations by using its Australian identity to position itself as a sustainable yet premium brand rooted in authenticity.

To broaden reach and encourage trial, Saya should make its products more accessible. Kotler and Keller (2021) describe this as a Down-Market Stretch, where smaller or lower-priced formats attract wider audiences. For its UK launch, Saya could offer discovery kits and travel-size versions of its bestselling moisturisers, body washes, and cleansers. These kits could also address key UK skincare concerns such as pigmentation, dryness, and blackheads (Your Beauty Daily, 2025). Tropic Skincare (2024) reports that moisturisers are used daily by 59% of consumers, followed by cleansers (33%), while retinoids are especially popular among millennials. Curated kits would help Saya lower trial barriers, align with local routines, and build early brand loyalty.

Market data supports this strategy. Euromonitor (2025) found that skincare sets and kits were the best-performing category in 2024, with sales up 8% to GBP 411 million. Over 70% of consumers are more likely to buy a full-size product after trying a sample (Virospack, 2024). Medpak Solutions (2024) adds that customised kits build loyalty, while Dataintelo (2024) values the global sample-pack market at USD 7.2 billion, led by Europe's demand for eco-friendly packaging. By embracing this trend, Saya can turn product sampling into a genuine growth driver.

Once accessibility is established, Saya's next priority is to deepen trust through transparency and sustainability. Ingredient-led beauty and eco-conscious packaging have become key purchase drivers in the UK, marking a shift from product trials to long-term loyalty. Euromonitor (2025) notes that ingredient-led beauty "is here to stay," with growing interest in actives like vitamin C and niacinamide. NielsenIQ (2023) similarly reports that 62% of consumers now see sustainability as more important than before. By highlighting traceable ingredients and recyclable packaging, Saya can strengthen its image as a transparent and ethical brand for environmentally conscious consumers.

By aligning its packaging, labelling, and product formats with UK regulations and evolving expectations, Saya Skincare shows both agility and market understanding. These adaptations reflect its core values of sustainability, transparency, and natural integrity, echoing Kotler and Keller's (2021) principles of effective product adaptation and strategic entry.

4.2 Pricing Strategy

Saya Skincare's pricing strategy for its United Kingdom market entry follows a value-based orientation grounded in Kotler and Keller's (2021, p. 454) six-step framework for strategic pricing. This model emphasises that price should reflect perceived customer value rather than production cost, ensuring consistency with the brand's ethical and experiential benefits. Saya's approach aims to achieve market penetration while maintaining a premium image aligned with its clean-beauty philosophy. The dual objective combines *penetration* and *skimming* logic: introductory prices through discovery kits encourage trial and brand familiarity, while premium pricing for hero products such as the *Super Serum* and *Intense Night Repair Cream* reinforces exclusivity and perceived worth. As Kotler and Keller (2021, p. 457) explain, a value-driven pricing structure builds brand equity and consumer loyalty by aligning financial and psychological value.

The demand outlook in the UK supports this strategy. According to Mintel (2024), 68% of British consumers seek skincare with clean ingredients, and 47% are willing to pay more for sustainable packaging. These insights indicate sufficient elasticity for Saya to charge roughly 10–15% more than mass-market competitors such as *The Ordinary* (£6–30) while positioning below luxury players like *Aesop* (£45–80). The target audience Millennials and Gen Z consumers aged 25–40 in cities such as London, Manchester, and Birmingham—values authenticity, transparency, and environmental responsibility. Demand performance will be monitored through direct-to-consumer (DTC) analytics that track conversion, repeat purchases, and average order value, consistent with Campbell (2020) and Shirley and Rowland's (2021) performance measurement models.

The cost structure supports commercial viability while maintaining ethical integrity. Saya's major costs include native botanical sourcing, organic-certified manufacturing, recyclable packaging (rPET and Miron glass), and partnerships with third-party logistics (3PL) providers. Regulatory compliance such as Responsible Person (RP) appointment and product registration under the UK Cosmetic Products Notification Portal adds further expense (Gov.uk, 2021; CIRS Group, 2025). Overall, cost of goods sold (COGS) is estimated at 25–30% of retail price, allowing gross margins of 60–65%, consistent with premium skincare benchmarks (Euromonitor International, 2025). Collaboration with a sustainable UK 3PL partner will streamline logistics, reduce emissions, and strengthen Saya's environmental credentials (3P Logistics, 2025).

Competitor benchmarking situates Saya within a strategic pricing corridor between *REN Clean Skincare* and *Pai Skincare* (£35–60), two key mid-premium brands combining natural formulations and ethical positioning. At the lower end, *The Ordinary* and *The Inkey List* (£6–35)

compete primarily on affordability and ingredient transparency, whereas *Aesop* (£80+) represents the upper tier of experiential luxury. Saya's proposed placement in the £45–60 range establishes an *accessible-premium* segment that conveys both efficacy and authenticity through its Australian botanical heritage (Grand View Research, 2023). This differentiation enables Saya to balance aspirational appeal with competitive attainability.

The pricing method centres on perceived-value assessment rather than cost recovery. Kotler and Keller (2021, p. 462) define value-based pricing as the process of quantifying customers' perceived benefits and setting prices accordingly. Saya's perceived value arises from both tangible efficacy, active ingredients such as niacinamide and bakuchiol and intangible elements, including Noosa origin, cruelty-free ethics, and environmental stewardship. This hybrid value perception aligns with Mintel's (2024) finding that authenticity and sustainability are decisive in fostering consumer trust in clean beauty brands. To simplify choice and guide purchasing behaviour, Saya will use *price lining*, organising its products into three tiers: discovery kits as entry-level offerings, serums as core performance products, and creams as luxury indulgences. This structure clarifies price–value differentiation and encourages customers to "trade up" as brand loyalty strengthens.

The final pricing configuration applies psychological and behavioural principles to maximise perceived fairness and value. Discovery kits will retail between £25 and £35 to reduce trial barriers. Serums will be priced between £45 and £60, mirroring competitors' mid-premium thresholds, while prestige creams will exceed £70 to reinforce exclusivity. Saya will apply *charm pricing* (e.g., £29 or £59) to enhance perceived affordability; Mintel (2024) notes that such techniques can increase conversion by 5–10% in beauty markets. A tiered pricing ladder—progressing from discovery kits to serums and then to creams—visually communicates incremental value, legitimising higher price points as reflective of quality and care rather than luxury excess.

Overall, Saya Skincare's pricing strategy integrates perceived-value logic, cost efficiency, and behavioural insight to position the brand as an ethical-luxury actor in the UK's rapidly expanding clean-beauty sector. By following Kotler and Keller's (2021, p. 468) structured pricing model defining objectives, analysing demand and cost, assessing competition, selecting a method, and setting the final price, the company achieves strategic coherence across economic and symbolic dimensions. Continuous DTC monitoring will ensure adaptive calibration to consumer preferences and macroeconomic shifts. This approach not only supports a profitable market entry but also institutionalises a sustainable, evidence-based framework for long-term value creation and brand equity growth in international skincare marketing.

4.3 Distribution Strategy

Channel strategy not only sets up a brand's competitive positioning in the marketplace but also determines whether the products will be purchased by the specific customers for whom they are designed. Centering on the theory of channel management (Kotler et al., 2021) and Soya Skincare's distinctive brand origin and characteristics, we propose to build a distribution system led by multichannel integration and sustainable logistics collaboration to make Soya enter the UK market successfully and develop a long-term business.

By combining Saya's unique "Clean. Conscious. Australian brand positioning with the preference of the UK consumer market for natural skincare and sustainable consumption, we recommend a dual-channel strategy, which will be achieved through two phases. As illustrated in Figure 1, in Appendix A.

Phase 1: Online Direct-to-Consumer (DTC) sales. Saya will launch GBP billing and a UK-based customer service system through the Shopify UK website to establish a localized direct-to-consumer sales platform, where the Shopify UK site will serve as the foundation. This channel effectively reaches a core group of young people in the United Kingdom, so that we can achieve greater brand control, strengthen customer relationship management (CRM), and ultimately achieve personalized communication with target customers. This channel is low-cost and suitable for initial entry.

Phase 2: Selective Offline Retail. After acquiring a certain amount of online sales, Saya can start to adopt a distribution model to sell in high-end UK department stores, like Selfridges and Liberty's London. Limiting the sell quantities can maintain the brand's higher-end markets and its brand consistency. This channel can also provide a rich experience for new Saya customers and guide the loyal customers who come again, so this can become a proof of the experience in a high-trust skincare category.We intend to merge the benefits of digital direct sales, that is, a well-known flexibility, with the advantages people's needs for experiential retail, and thus to reach a sustainable balance. Reaching a sustainable balance is not only about sustainability but also about two things this implies in three aspects. Firstly, the characterization of the consumer targeted: the British beauty market is one with a huge clientele for environment-friendly brands, and the UK consumers prefer a blend of online and offline experience. This model is helpful in improving the brand transparency and trust. Also, the brand identification comes with the ethical consumption since Carrigan (2023) argues that this has always been the market of interest to the targeted market segment and hence the strategy fits within the overall brand philosophy of the dyes and Soya. Selfridges further strengthens the brand endorsement with partnership. Individuals with some experience in consuming will appreciate the dual channel since they can

first try out the product before making the actual purchase. Lastly, I wish to confirm what I said earlier by highlighting that this model improves operational efficiency by decreasing inventory risks and increasing order processing time.

4.4 Communication Strategy

Saya Skincare's marketing goals consist of mainly fostering brand awareness, creating trust and ensuring customer loyalty. This article will consolidate the main brand philosophy of Saya via utilizing the AIDA model and IMC framework, which creates a multi-faceted communication system for Saya.

Table 3. Integrated Marketing Communications Plan for Saya Skincare

Tool	**Message**	**Channel**	**Target Audience**	**KPI**
Social Media Advertising	"Clean. Conscious. Australian."	Instagram, TikTok	Eco-conscious female consumers aged 18–35 in the UK	Engagement rate (%), click-through rate (CTR)
Public Relations & Media Features	Showcase sustainable sourcing and ethical production stories	British *Vogue Clean Beauty*, online beauty magazines and blogs	Clean-beauty enthusiasts and premium skincare readers	Earned media mentions, brand awareness lift
Influencer & Content Marketing	Authentic user experience and trust-building storytelling	UK clean-beauty KOLs via YouTube & Podcasts	Social-media active consumers interested in ethical brands	Conversion rate (%), follower growth rate

Loyalty & Trial Campaigns	*Saya Circle* membership – "Join the clean beauty movement"	DTC website and retail partner co-promotions	First-time buyers and repeat customers	Repeat-purchase rate, new member registrations
Offline Experiential Marketing	"Clean Beauty Experience Zone" – touch and learn about eco values	In-store events at Selfridges and Liberty London	Premium department-store visitors and skincare shoppers	Event attendance, in-store sales conversion rate

The first step is to rise attention to the people. Taking Instagram or TikTok as the mainstream short video platforms, putting the fragmented information in the center can better attract the consumers' attention. Saya can simply make short video ads by showing the Australian-sourced ingredients, natural ingredients, eco-friendly packages, and any other interesting features of the product. Apart from reaching the public through short video platforms, Saya can also collaborate with media like British Vogue Clean Beauty to get featured coverage for the brand, demonstrating more professionalism and paving the way for future responsibility.

The second step is to build up interest and desire. Saya can team up with local British beauty bloggers, starting some product experience programs. YouTube/Blog platforms can enable Saya to further spread its brand values and philosophy. This stage depends on the extent of user-generated content (UGC), where top influencers will help show the product value and users' experiences that can eventually lead to customers' purchase desire.

The third step is to guide into the action. As the new product is first launched, brands give trial benefits and other benefits to first-time customers to successfully acquire repeat customers and spread word-of-mouth, while actively seek users' feedback. Thereby, Saya places its priority on the online store first, with pop-up experiences (for instance, the sustainability-themed exhibition in Selfridges) acting as supplementary channels, to form a closed-loop communication cycle of "online exposure – offline experience – online repeat purchase.". Efficient IMC is also required to maintain a consistent message and brand voice across the various interactions and experiences, achieving cross-channel consistency and communication synergy (Ots & Nyilasy, 2017).

Communication efficiency will be measured from four indicators: engagement rate, earned mentions, conversion rate, and repeat purchase rate, and the strategies will be dynamically adjusted when necessary.

Appendix A

Timeframe	Objective	Key Performance Indicators (KPI)	Justification
Short-term (Year 1)	Increase brand awareness by 10% in the UK through targeted social media and influencer marketing.	Brand online surveys, website visits, and online customer engagement.	Build brand awareness among women aged 25-40 who are environmentally conscious, natural, and cruelty-free in London, Manchester, and Birmingham (Mintel, 2025).
Medium-term (Years 2–3)	Achieve £500,000 in direct sales and a 25% repurchase rate through the UK-focused website.	Website purchase data, customer profile share, conversion rate, and repurchase data.	This validates Saya's direct-to-consumer (DTC) model, aligns with the clean beauty sector's 15.2% annual growth rate, and builds consumer loyalty (Grand View Research, 2023).
Long-term (Years 4–5)	Establish partnerships with three high-end retailers, including Selfridges, Harrods, or Liberty.	Number of retail partners and share of retail sales.	Increase Saya's legitimacy and visibility in the high-end skincare market (Euromonitor International, 2025).

Table 1. SMART Marketing Objectives for Saya Skincare in the UK Market

Brand	Key Strategy / Product Adaptation	Sustainability & Transparency Approach	Discovery / Trial Formats	Sources
Tropic Skincare	Naturally derived actives; clear labelling	Certified carbon-neutral; refillable packaging	Discovery sets and mini routines	Tropic Skincare (2024); www.tropicskincare.com
